cropx

THE CROP MULTIPLIER

EASY-TO-USE, POWERFULL, PROVEN

Field Data Management - Agronomic Planning - Tracking and Reporting
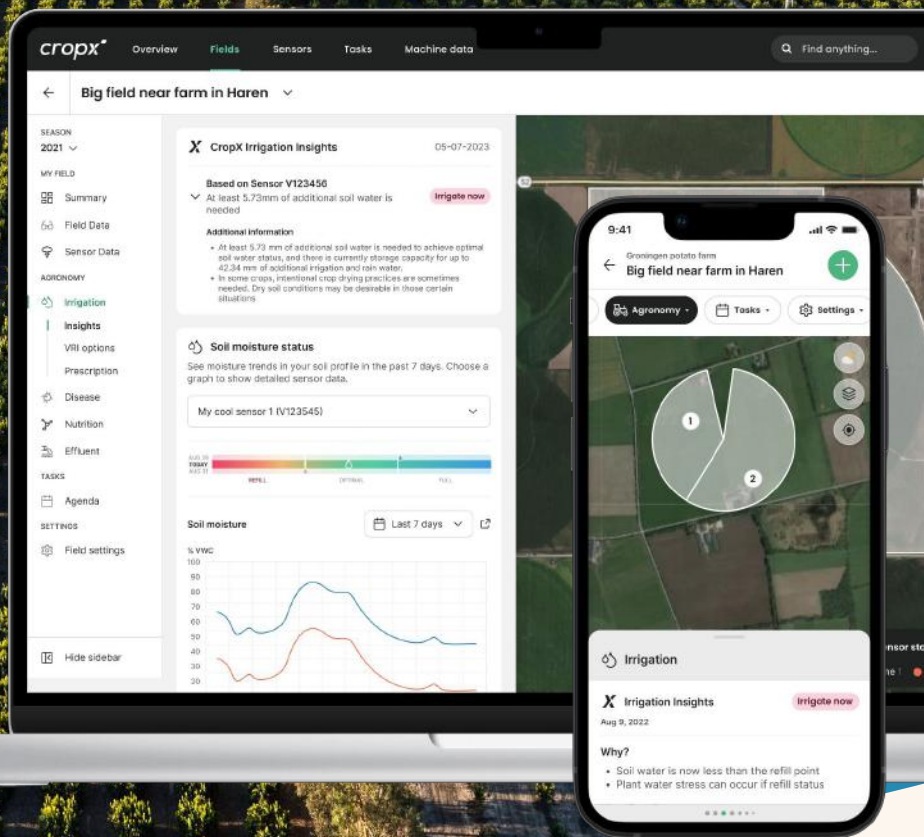

Activating Farm Data From Soil To Sky

The CropX agronomic farm management system is an easy-to-use integrated software and hardware system that connects farm data, real-time conditions and agronomic knowledge to provide guidance for successful and sustainable farming, while aggregating all agronomic farm data in one place for easy tracking and sharing.

Irrigation planning

Know exactly when and how much water to apply. Save water and avoid crop stress.

Disease control

Optimize spray timing by knowing exactly when, where, and what to apply. Save costs while maximizing protection.

Farm data connectivity

Connect thousands of data points from sources on and around the farm onto one platform.

Effluent irrigation

Allows farmers to turn animal waste into an asset that grows their pastures and crops while minimizing runoff and leaching.

Nutrition monitoring

Control costs while maximizing yields with this first-of-its-kind solution for continuously monitoring salinity and nitrogen leaching.

Tracking & Reporting

With a click of a button, CropX will compile data in a report format for easy and comprehensive review.

Complete and accurate data sets
CropX collects, transforms, and activates complex data sets:
- Tested and validated proprietary crop models
- Machine data automatically imported through API connection
- Soil data, weather, topography, satellite data, and more

Maxi

Easy-To-Install, Accurate, Dependable Hardware

Data from below the ground is essential for providing accurate and predictable agronomic insights. Using sensors to capture data enables CropX to generate recommendations on what a plant needs before it starts showing stress.

CropX Telemetry Device
- Allows growers to use their hardware
- Connect 3rd-party devices such as sensors, flowmeters, and rain gauges
- Easy to install and connect

CropX ET Sensor
- Easy-to-remove thermocouple
- Flexible mounting options
- Protective steel wire cage

CropX Soil Sensor
- Unique spiral design improves accuracy of soil data readings
- Can be installed in less than 5 minutes
- Built-in telemetry and power source

CropX Rain Gauge
- Accurately measures rainfall
- Easy installation and connection to the CropX platform
- Detailed charts, data and analytics at your fingertips

mize yields   Save time and money   Increase sustainability

About CropX Technologies

CropX Technologies is one of the fastest growing providers of agribusiness farm management solutions in the world, deployed in over 60 countries and across all the arable continents.

Our solutions master data from the soil to sky to offer advanced farm data intelligence and a suite of digital decision and planning tools, all within an easy-to-use system.

CropX Technologies is backed by the world's leading agribusinesses and VCs, who recognize that our Precision-AG technologies set new standards of best practices for environmental sustainability and greater farm productivity.
