TELEMETRY
CONNECT DATA SOURCES

This product is for customers with non-CropX soil sensors and other data capture hardware such as weather stations and rain gauges that want to access the powerful CropX solution. Data collected from connected devices is fed into the CropX system, allowing users to access data visualizations and agronomic advice from their desktop or mobile devices.

Features:

- Season-long battery life and optional solar panel options

- Sleek design with tool-free installation

- Easy device activation

- Ability to connect to a broad range of sensors

CropX TD2 Connections:

Two SDI-12, two pulse and one current loop (4-20 mA) input(s) available to connect the following devices:

- Soil sensors – Sentek, EnviroPro, Aquacheck

- Rain gauge – CropX, Davis

- Flow meter

- Effluent pond level meter

- Pump switch

Access the Simple yet Powerful CropX Platform

The CropX agronomic farm management system is an easy-to-use integrated system that connects farm data, real-time conditions, and agronomic knowledge to provide useful guidance for successful and sustainable farming, while aggregating all agronomic farm data in one place for easy tracking and sharing.

The Power of Data-driven Farming

CropX advisors provide clear insights and advice based on data sources from soil to sky, agronomic knowledge, and real-time conditions.

Field Data Management

- Activate farm data for operations optimization and reporting.
- Connect data from machinery, sensors, satellites, and more on one platform.
- Receive reports and share information with partners, customers, employees, and more.

Agronomic Planning

- Optimize irrigation, disease, and effluent management, planning, and execution.
- Monitor nitrogen movement and salinity levels in the soil
- Maxmize yields and save time and money while minimizing resource use.
