

CROPX VISION

BUILT FOR PRECISION

CropX Vision lets vineyard teams capture leaf water potential directly from the plant using a simple smartphone photo.

Think of CropX Vision as a **scalable**, in-season alternative to the pressure chamber delivering **plant-level water stress insights** across your entire **vineyard**, without bulky equipment or limited sampling.

Readings are **instantly** available in the CropX **mobile** and **web platform**, so decisions can be made when they matter most.

Built for precision viticulture

- **Plant-level precision** - Measure water stress at the individual vine level not just a few sample points.
- **Replace the pressure chamber** - Pressure chambers are accurate, but slow, heavy, and impossible to scale. CropX Vision delivers comparable insight in a practical, field-ready workflow.
- **More readings, better decisions** - Anyone with a phone can take readings. You're no longer limited by equipment availability or labor.
- **Consistent and reliable** - No rushed measurements. No protocol errors. Just fast, repeatable readings you can trust.
- **Instant reporting** - Readings and vine photos sync automatically. No clipboards. No spreadsheets. No delays.
- **Eyes on every block** - See leaf water potential data alongside actual vine images all in one place.

Complete visibility. From vine to vineyard.

CropX Vision gives you a clear view of plant-level water stress across your entire vineyard. Capture readings in the field with the mobile app, analyze trends and review vine photos in the web dashboard, and zoom from vineyard-level insights down to individual blocks. Unlimited readings, unlimited users, and built-in CropX support ensure your team always has the data they need without complexity.

Precision irrigation. Made practical.

"CropX Vision gives us the ability to take quick, accurate water stress measurements that don't require specialized training or cumbersome equipment. This helps us easily create our weekly irrigation schedules. My advice to anyone considering CropX vision is to give it a try. Expect to be humbled, learn from technology and let it help you become a better irrigator."
